byproduct_offgrade	19	136.3
process_loss	19	78.5
wastage	18	0.0
rejection	1	0.2
material_return	1	51.7

Counts are point-in-time snapshots from warehouse_db. Latest = MAX(created_at|updated_at|recorded_at) where present. *Filled but stuck = job cards with recorded production output (job_card_output) whose status never reached completed/closed — typically blocked by the R9 unbalanced-accounting / open-batch completion gate; counted as effectively complete.

Production Module - Entry Counts Report

Weekly bifurcation — rows bucketed by ISO week (Monday, UTC) of created_at
Generated 2026-06-11 11:46:52 UTC / Database: warehouse_db / Includes v1 + v2 schemas

Weekly entry counts

Each row is one week. 'JCs' = job cards created that week. 'Compl' = reached completed/closed; 'Stuck*' = filled (has output) but not completed; 'Done' = Compl + Stuck (effective). Plans, orders and indents counted by their own creation week.

Week (Mon)	JCs	Compl	Stuck*	Done	Prod ord	Plan hdr	Plan In	RM ind	Batch kg	Loss kg
